GIS NEXRAD layers

Warning Verification

IEM NEXRAD composite base reflect valid: 01 March 2007 12:00 PM

The NEXRAD layer used in these images are available in a georeferenced RASTER format. You will need this <u>this world file</u> to correctly georeference them. The projection of these images is geographic NAD83 (*unprojected*). You will need to rename the world file to match the filename of the RADAR layer before loading into your GIS.

Reset Application for a Current Loop

Of course, IEM Chat

- A system to support the real-time collaboration of operational meteorologists and emergency management
- Standards based, open source software to do instant messaging
- Project launched June 2005
- 850+ accounts, ~200 TV stations, and 41 WFOs are currently using it

Chatroom interaction (11/12/05)
